Summary

Senior Software Engineer with 3.5+ years of experience designing and delivering production-grade Android applications and platform features using Kotlin and Java. Experienced across Android, Wear OS, and Android XR, with hands-on ownership of cross-device communication, background processing, performance optimization, reliability, and testing. Contributed to commercial Samsung products, including Find My Mobile, Galaxy Watch, and Android XR initiatives, with additional experience building backend services using Spring Boot and distributed systems.

Experience

Samsung (Senior Software Engineer)

Mar 2023 – Present (Bangalore, India)

Key Skills: Kotlin, Java, Android, Wear OS, Android XR, Android Services, MVVM, Spring Boot
FMM (Find My Mobile) – Android / Wear OS / Android XR

- Redesigned the end-to-end communication architecture for FMM phone-to-Watch operations, replacing server-mediated requests with direct device-to-device communication and reducing operation latency by **80%** while improving request success rates from **92% to 98%**.
- Owned **end-to-end architecture, design, development, and deployment** of Find My Mobile for Android XR glasses, building the feature from the ground up and defining the communication architecture between the XR device and companion phone.
- Reduced Android **ANR incidents to 0%** by refactoring legacy Java components to Kotlin and optimizing execution paths, improving runtime efficiency and reducing battery consumption.
- Maintained **80%+ unit test coverage** across FMM components using JUnit and Mockito, strengthening regression protection and reliability across production releases.

Wearable Intelligence – Android / Wear OS POC

- Developed an Android and Wear OS proof of concept that analyzed notifications and calendar events using a lightweight on-device LLM, extracting **7–10 meaningful event attributes** from unstructured text to create structured, contextual event data.
- Generated domain-specific training data and optimized a lightweight on-device LLM for event-information extraction, reducing feature-extraction latency by **30%** compared with earlier regex-based and generic-model approaches.
- Designed an end-to-end phone-to-watch intelligence pipeline across **5 demo scenarios**, synchronizing extracted event data through Wear OS listener services and enabling dynamic, context-aware experiences on the wearable.
- Built lifecycle-aware Wear OS cards supporting **3–5 states per event type**, dynamically adapting status, content, messaging, and action buttons across stages such as booking confirmation, day-of reminders, and post-event updates.

Living Labs – Backend

- Designed and implemented backend services across a **10-service microservices architecture** supporting **10K+ users**, contributing to API contracts, database design, and transactional workflows.
- Architected and implemented a stateless **GraphQL BFF end-to-end**, reducing client-side API calls by **45%** and response payload sizes by **60%** while preserving compatibility with existing REST clients and services.
- Owned backend services through the production lifecycle, supporting CI/CD, performance optimization, observability, and reliability improvements across development, staging, and production environments.

DAZN (Associate Software Engineer)

Nov 2022 – Feb 2023 (Hyderabad, India)

Key Skills: New Relic, SQL, React, TypeScript

- Monitored live high-traffic sporting events using New Relic dashboards, analyzing application performance and identifying production bottlenecks to support incident investigation and performance optimization.
- Analyzed recurring performance bottlenecks across live-event traffic and documented findings in detailed reports, helping engineering teams prioritize areas for investigation and optimization.

Cognizant (Software Engineering Intern)

Feb 2022 – Aug 2022 (Hyderabad, India)

Key Skills: CRM, Salesforce, Apex Programming

- Gained hands-on experience developing Salesforce CRM solutions using Apex and Visualforce.
- Developed experience with cloud-based enterprise solutions and automated business processes.

Technical Skills

Languages: Kotlin, Java, Python, SQL, JavaScript

Mobile & Platforms: Android, Wear OS, Android XR, Flutter

Android Development: Android SDK, Android Services, Background Processing, Cross-Device Communication

Architecture & Concepts: Asynchronous Processing, Concurrency, Performance Optimization, Battery Optimization

Testing: JUnit, Mockito, Unit Testing

Backend: Spring Boot, Microservices, REST APIs, GraphQL, OpenFeign, JPA/Hibernate

Databases & Cloud: PostgreSQL, MySQL, MongoDB, AWS S3, SQS, ECS, Lambda

Tools & Observability: Git, Docker, Jenkins, CI/CD, Grafana, CloudWatch, New Relic

Projects

Zero Miles – Full-Stack Mobile App | *Flutter, Supabase, PostgreSQL, FCM*

- Architected and built a serverless backend using **PostgreSQL, PostgREST, and Deno Edge Functions**, exposing **20+ API endpoints** and enforcing multi-tenant data isolation through Row-Level Security (RLS) across **11 tables**.
- Engineered a concurrent couple-pairing workflow using atomic PL/pgSQL RPCs and row-level locking, reducing network round-trips by **~75%** by consolidating four sequential operations into a single transaction while preventing duplicate token redemption.
- Designed an event-driven notification architecture using PostgreSQL Webhooks and Deno Edge Functions to trigger Firebase Cloud Messaging, while replacing HTTP polling with **WebSocket-based real-time streams** for live state synchronization.

DermAssist – AI Agent | *Python, FastAPI, React, TypeScript, Mistral AI, SQLite*

- Built an AI-agent application using **Python and FastAPI**, implementing a ReAct-based workflow with external tool integration and real-time **SSE streaming** for interactive responses.
- Designed asynchronous agent workflows integrating **Mistral AI** models, external web-search tools, and persistent session state using SQLite, enabling coordinated agent, critic, and vision processing.
- Developed and deployed the full-stack application with **React, TypeScript, and FastAPI** on Hugging Face Spaces, owning the architecture and implementation across backend, frontend, and AI integration layers.

Awards & Achievements

Star of the Quarter – Recognized for contributions to the commercialization of Galaxy Watch 8; **Team Awesome Award (2x)** for contributions to the Find My Mobile project.

Project of the Year (R&D) – Recognized with a Certificate of Appreciation for outstanding contributions to Project Moohan (VST), a first-of-its-kind Android-based XR device.

Software Competency (SWC) – Completed Samsung's Professional and Advanced competency levels.

Education

Osmania University - 8 CGPA

Bachelor of Technology in Computer Science & Engineering

Hyderabad, India

2018 – 2022

Certifications

AWS Certified Developer & Data Engineer – Associate: Amazon Web Services (2024)

Android Development & Machine Learning Specialization: Coursera
