Summary

Senior Software Engineer with 3.5+ years of experience designing and delivering production-grade backend systems using Java, Spring Boot, Microservices, REST APIs, GraphQL, PostgreSQL, and AWS. Experienced in end-to-end API ownership, distributed systems design, asynchronous processing, caching, transactions, concurrency, and production reliability. Hands-on production ownership spanning CI/CD, observability, performance optimization, and post-deployment support.

Experience

Samsung (Senior Software Engineer)

Mar 2023 – Present (Bangalore, India)

Key Skills: Java, Spring Boot, Microservices, REST APIs, GraphQL, AWS S3, AWS SQS, PostgreSQL, JPA/Hibernate, Valkey, Feign, Android, Kotlin

Living Labs – Backend

- Designed and implemented backend services across a **10-service microservices architecture** supporting **10K+ users**, contributing to service boundaries, API contracts, database design, and transactional workflows.
- Architected and implemented a stateless **GraphQL BFF end-to-end**, consolidating downstream APIs, reducing client-side API calls by **45%** and response payload sizes by **60%**, while preserving compatibility with existing REST clients and services.
- Designed and implemented REST APIs end-to-end, owning request/response models, validation, database integration, error handling, backward-compatible API evolution, and concurrency-safe, idempotent transaction workflows.
- Reduced API p95 latency from **500 ms to 400 ms (20%)** by optimizing database queries, eliminating redundant downstream calls, and implementing service-specific caching strategies, validated through Grafana monitoring.
- Built an asynchronous health-data ETL pipeline processing **22 schemas** for **10,000+ users**, with auto-scaling ECS capacity from **0–10 tasks**, JSON-to-Parquet transformation achieving **~ 80% storage reduction**, and reliable SQS-based processing with **zero data loss**, replacing siloed integrations with a unified, analytics-ready pipeline.
- Owned backend services through the production lifecycle, supporting CI/CD across development, staging, and production, investigating incidents through Grafana, CloudWatch, logs, and traces, and increasing microservice test coverage from **45% to 85%** through expanded unit, integration, and failure-mode testing.

FMM (Find My Mobile) – Android / Platform

- Eliminated unnecessary server hops for most frequent FMM operations by introducing direct phone-to-Watch request, **significantly reducing operation latency by 80%** and improving request **success rates from 92% to 98%**.
- Reduced Android **ANR incidents to 0%** by refactoring legacy Java components to Kotlin and optimizing execution paths, improving runtime efficiency and reducing battery consumption.
- Maintained **80%+ unit test coverage** across FMM components using JUnit and Mockito, strengthening regression protection and release reliability.

DAZN (Associate Software Engineer)

Nov 2022 – Feb 2023 (Hyderabad, India)

Key Skills: New Relic, SQL, React, TypeScript

- Monitored live high-traffic sporting events using New Relic dashboards, analyzing application performance and identifying production bottlenecks to support incident investigation and performance optimization.
- Analyzed recurring performance bottlenecks across live-event traffic and documented findings in detailed reports, helping engineering teams prioritize areas for investigation and optimization.

Cognizant (Software Engineering Intern)

Feb 2022 – Aug 2022 (Hyderabad, India)

Key Skills: CRM, Salesforce, Apex Programming

- Gained hands-on experience developing Salesforce CRM solutions using Apex and Visualforce.
- Developed experience with cloud-based enterprise solutions and automated business processes.

Technical Skills

Languages: Java, Python, SQL, Kotlin, JavaScript

Backend: Spring Boot, Microservices, REST APIs, GraphQL, OpenFeign, JPA/Hibernate, Node.js

Distributed Systems: Event-Driven Architecture, Asynchronous Processing, Concurrency, Idempotency, Caching

Databases & Storage: PostgreSQL, MySQL, MongoDB, AWS S3

Cloud & Infrastructure: AWS, SQS, ECS, Lambda, Docker, Jenkins, CI/CD

Frontend & Mobile: React.js, Android, AndroidXR, WearOS

Observability: Grafana, CloudWatch, New Relic

Projects

Zero Miles – Full-Stack Mobile App | *Flutter, Supabase, PostgreSQL, FCM*

- Architected and built a serverless backend using **PostgreSQL, PostgREST, and Deno Edge Functions**, exposing **20+ API endpoints** and enforcing multi-tenant data isolation through Row-Level Security (RLS) across **11 tables**.
- Engineered a concurrent couple-pairing workflow using atomic PL/pgSQL RPCs and row-level locking, reducing network round-trips by **~75%** by consolidating four sequential operations into a single transaction while preventing duplicate token redemption.
- Designed an event-driven notification architecture using PostgreSQL Webhooks and Deno Edge Functions to trigger Firebase Cloud Messaging, while replacing HTTP polling with **WebSocket-based real-time streams** for live state synchronization.

DermAssist – AI Agent | *Python, FastAPI, React, TypeScript, Mistral AI, SQLite*

- Built an AI-agent application using **Python and FastAPI**, implementing a ReAct-based workflow with external tool integration and real-time **SSE streaming** for interactive responses.
- Designed asynchronous agent workflows integrating **Mistral AI** models, external web-search tools, and persistent session state using SQLite, enabling coordinated agent, critic, and vision processing.
- Developed and deployed the full-stack application with **React, TypeScript, and FastAPI** on Hugging Face Spaces, owning the architecture and implementation across backend, frontend, and AI integration layers.

Awards & Achievements

Star of the Quarter – Recognized for contributions to the commercialization of Galaxy Watch 8; **Team Awesome Award (2x)** for contributions to the Find My Mobile project.

Project of the Year (R&D) – Recognized with a Certificate of Appreciation for outstanding contributions to Project Moohan (VST), a first-of-its-kind Android-based XR device.

Software Competency (SWC) – Completed Samsung’s Professional and Advanced competency levels.

Education

Osmania University - 8 CGPA	Hyderabad, India
<i>Bachelor of Technology in Computer Science & Engineering</i>	<i>2018 – 2022</i>

Certifications

- AWS Certified Developer & Data Engineer – Associate:** Amazon Web Services (2024)
- Android Development & Machine Learning Specialization:** Coursera
